THE APPROACH OF PRIGO SCHOOLS TO THE USE OF ARTIFICIAL INTELLIGENCE (AI) IN EDUCATION AND RESEARCH

We, the PRIGO group of schools, recognise the growing significance of artificial intelligence in education and research and are committed to promoting its application to the greatest possible extent. However, we pledge to ensure its responsible and ethical use, based on the following principles.

1. FAIRNESS AND EQUAL OPPORTUNITIES

AI must serve as a tool that facilitates equal access to education, ensuring that no pupil or student is disadvantaged due to technological disparities. We strive to harness AI to personalise learning and support the individual development of all pupils and students, regardless of their socio-economic background or specific needs.

2. SAFETY AND ETHICAL RESPONSIBILITY

In implementing AI, we place a strong emphasis on data protection, cybersecurity, and the prevention of technology misuse. Our schools must employ AI transparently and responsibly, enabling pupils, students, and teachers to benefit from its advantages without compromising privacy or the integrity of the educational process.

3. CRITICAL THINKING AND A HUMAN-CENTRED APPROACH

AI is a valuable tool, but it cannot replace human creativity, empathy, or critical reasoning. Our educational approach fosters the ability of pupils and students to assess information critically, recognise the limitations of AI, and develop skills that will enable them to engage responsibly and effectively with technology for the benefit of society.
